PROFESSIONAL SUMMARY

Software engineer with 15+ years of experience building enterprise systems in C# and .NET end to end — from domain modeling to production deployment. Serves as a technical reference within the team and has led a squad as team lead, contributing to architecture decisions and supporting other developers. Background in ERP, banking, people management platforms and, currently, carbon emission calculation. Hands-on with Vertical Slice Architecture (VSA), layered architecture and Domain-Driven Design (DDD), REST APIs, Blazor, SQL Server and PostgreSQL, containerization with Docker and CI/CD pipelines on Microsoft Azure and Google Cloud Platform. Advanced English, working daily with a distributed international team.

TECHNICAL SKILLS

Languages and Frameworks: C#, .NET, .NET Core, .NET 10, ASP.NET, ASP.NET Core MVC, REST Web API, Blazor (Server and WebAssembly), Entity Framework Core, WPF, WCF, Web Forms, Python, JavaScript, HTML5, CSS3, Angular

Architecture: Vertical Slice Architecture (VSA), Domain-Driven Design (DDD), layered architecture, REST APIs, system integration, multi-tenant services, authentication and authorization (OAuth 2.0 / OpenID Connect)

Cloud and DevOps: Microsoft Azure, Google Cloud Platform (GCP), Docker, Jenkins, GitHub Actions, CI/CD, Git, Nginx, Linux

Databases: SQL Server, PostgreSQL, MySQL, T-SQL

Platforms and CMS: Sitefinity

Artificial Intelligence: AI agents (Claude Code, GitHub Copilot) applied to the software development lifecycle, LLMs, vibe coding, Model Context Protocol (MCP), engineering automation

Methodologies: Scrum, Kanban, Jira, Code Review, Automated Testing

PROFESSIONAL EXPERIENCE

Marlabs — Belo Horizonte, Brazil (remote)

Senior Software Developer — client: UL Solutions | Jun 2026 – Present

- Develop the new greenhouse gas (carbon footprint) calculation platform in C# and .NET with REST APIs, set to replace the legacy system that serves UL Solutions' enterprise clients.
- Model and evolve the new system's relational database (SQL Server and PostgreSQL), with services hosted on Microsoft Azure.
- Work within a distributed international team, running ceremonies, code reviews and documentation in English.

Independent Projects — RVM Ecosystem

Software Engineer | Feb 2026 – Jun 2026

- Designed and built, from scratch to production, an ecosystem of applications using Vertical Slice Architecture (VSA), on .NET 10, Blazor Server, Entity Framework Core and PostgreSQL, deployed to a Linux VPS with Docker, Nginx and SSL.
- ERPAgro: vertical ERP for small-scale farmers, operated through WhatsApp in natural language (MCP layer) and complemented by a web admin panel; generates the Brazilian LCDPR tax report for accountants.
- Payments service: Pix, bank slip and credit card billing, abstracting multiple providers (Asaas and Inter), with per-application data isolation via API Key and signed webhooks.
- Centralized identity service (authentication and authorization) consumed by every application in the ecosystem.

- CI/CD pipelines with GitHub Actions and segregated development, staging and production environments.
- Used AI agents as an engineering tool across the whole cycle: specification, implementation, code review and deployment.

Questrade — Belo Horizonte, Brazil

Senior Software Developer | Jun 2019 – Jan 2026

- Developed and maintained the bank's web systems in C# and .NET on top of the Sitefinity CMS, which sustained peaks of over 10,000 account openings per day during the pandemic.
- Recognized as the technical reference of a 6-developer team — several with 10 years at the company — within the first year: actively took part in solution architecture decisions, supported complex problem solving and led code reviews.
- Technical owner of the bank's affiliate and partner systems, covering 50+ active affiliates, including commission rules and integrations with internal systems.
- Built REST APIs and integrations across the bank's platforms.
- Worked in a regulated financial environment — security, traceability and audit requirements —, communicating daily in English with the team and business stakeholders in Canada.

Mereo — Belo Horizonte, Brazil

Senior Software Developer / Team Lead | Jul 2018 – Jun 2019

- Led a team of 3 developers and 1 QA responsible for the performance review module of a SaaS HR management platform.
- Built the employee assessment features: nine box matrix and succession planning for key positions.
- Platform in C# with ASP.NET and an Angular 2 front end, with REST APIs consumed by the web application.
- Modeled and optimized the SQL Server database.

EMC — Belo Horizonte, Brazil

Mid-level Software Developer | Jan 2017 – Jul 2018

- Built from scratch the ERP that came to run the operation of a 100+ employee company, after failed attempts to roll out SAP and TOTVS.
- Owned the domain modeling with Domain-Driven Design (DDD) and the design of the system's layered architecture.
- Delivered modules for IT equipment leasing — the company's core business —, service orders, contracts, finance and customer support.
- Built a WPF desktop interface for internal users and Web Forms + WCF for external clients.

Experience prior to 2017 available upon request.

EDUCATION

Bachelor's Degree in Information Systems — Faculdade Infórium de Tecnologia, Belo Horizonte, Brazil

Graduated: 2009

CERTIFICATIONS AND COURSES

- Exam 480: Programming in HTML5 with JavaScript and CSS3 — Microsoft
- AZ-900: Microsoft Azure Fundamentals — in progress
- PHP — web development course

LANGUAGES

- Portuguese: native
- English: advanced (meetings, code review and technical documentation)
